Aquatic mammals and their adaptations pdf printable calendar free template

There are also several species that have evolved structural adaptations like flexible rib cages that allow their airways and lungs to collapse as they dive and then re-expand as they surface. Bright colors simply won't look as vibrant on basic printer paper. More ready-to-go printables than actual templates — the calendars aren't customizable at all — the options always look sleek and professional. Land mammals keep warm in cold climates with thick layers of fur hair covering their bodies. The word endothermy comes from Greek root words meaning heat within. The exception to this rule is deep-sea benthic habitats, although some cetaceans do dive deeply. Pinnipeds and otters have powerful webbed limbs that allow them to swim quickly (Fig. If you want a wall calendar that focuses on large spaces for writing instead of colorful designs, Print-a-Calendar could be the answer. Ocean water is much colder than the internal body temperature of most mammals. You will have to sign in to your Microsoft account to access the premium options. In the right hands, calendars become elaborate planning tools that help you organize everything from your own daily business meetings to your kids' medical appointments and extracurricular activities. Blubber is the dense layer of fat tissue under the skin of almost all marine mammals (Fig. Sperm whales (Fig. 6.19). For example, many deep-diving mammals have increased levels of enzymes that help break down lactic acid. While most marine mammals make several short dives, some regularly make long deep dives (Fig. Unlike the obligate swimmer groups, pinnipeds, otters, and the polar bear have dense, thick coats of fur to keep them warm in and out of the water. Most mammals can tolerate a small amount of lactic acid for a short period of time. If you merely care about basic functionality and opt for a simple calendar printout to stick in the console of your car, then you don't need anything special for printing. They maintain this fluffy insulation by constantly grooming themselves and each other. In fact, with so many options to choose from, you may decide you want a personalized calendar in every room of your home. Some marine mammals have more blubber than others. Photo Courtesy: Jasper Cole/Getty Images Calendars serve as an essential tool when you need to stay organized. The Freebie gallery at Cottage Market also has links to printable calendars and daily planners, including an adorable Harry Potter set for fans of the wizarding world. Bowhead whales can have up to 50 cm of blubber. Increases in pressure associated with diving also present physical problems for mammals in terms of the gas solubility. Although polar bears lack true blubber, they do have a similar layer of thick fatty tissue—up to 11 cm thick—under their dense fur. To do this, the blood and muscle have higher concentrations of oxygen carrying molecules called hemoglobin and myoglobin. You can print pages with slots for appointments for every hour of the day as well as pages with lesson plans and daily goals and to-do lists. Harbor porpoises typically only have 2.5 to 3 centimeters (cm) of blubber. It's usually easy to find sites with good templates for basic calendars. The primary way that marine mammals have adapted to maintain their internal body temperatures in these cold environments is with insulating layers that retain body heat. This extremely no-muss/no-fuss website allows you to easily print plain monthly calendars, but it does offer a big perk to balance the boring look. For this reason, scuba divers must slowly return to the surface to off-gas. If you plan to write on the calendar, opt for a bright white, premium quality paper that is right below photo quality. The options range from creative abstract designs to colorful florals and classic plaids. All whales and dolphins are obligate swimmers. MORE FROM QUESTIONSANSWERED.NET Mammals have adapted to survive in every habitat where other animal taxa occur. If a mammal begins to overheat, it can secrete sweat or increase blood flow to the skin to cool off. Another issue that marine mammals face is that at increased depths, gas is absorbed in the tissues and blood of organisms. Generating and Retaining Heat Endothermy is the process of generating heat from the chemical digestion of food. Scuba divers refer to this impairment as nitrogen narcosis. Photo Courtesy: BotanicalPaperWorks.com The offerings at Botanical Paper Works are about as simple to work with as you can get. An obligate swimmer is any species that spends its entire life in water. Fortunately, you can find plenty of useful and attractive calendar templates online in numerous styles to help with organizing a range of activities. For hanging your calendar on the wall, you can use pretty pushpins or colorful thumbtacks or a reusable mounting putty if you want to avoid making a hole in the wall. For example, a balloon filled with one 1 liter (L) of air at the surface decreases in size 50 percent when moved 10 m below the surface. Homeostasis is the condition of a body system that is actively regulated to remain consistent. The sea otter has the thickest fur of any mammal with up to 165,000 hairs per square centimeter of skin. They have adapted broad paws on their powerful fore limbs that allow for swimming hundreds of miles over several days. As pressure increases, the partial pressure of each gas in air can increase to toxic levels for the organism. 6.21) are some of the deepest diving organisms on the planet. This behavior can reduce the impact of gas toxicity and decompression sickness. The partial pressure of a gas, like N2 or O2, in a gas mixture like air is the pressure of that gas at the volume of the entire mixture. Oxygen becomes toxic to humans at 1.6 atm or greater partial pressure. Activity Investigate the role of marine mammal blubber and fur in maintaining internal body temperature. Creative and Colorful Calendar Printables Any store with office and school supplies is sure to have an ample selection of gorgeous wall calendars and book-style planners, but the price tags on these items can be ridiculously high. Pinnipeds, otters, and the polar bear are not obligate swimmers because they can live on dry land. Air compresses under pressure. Mammals have air-filled spaces in their ears and lungs, all of which have the potential to collapse under high pressures. You can type your schedule (if you already know it) right into the daily boxes on the website before printing, eliminating the need to worry about your handwriting size. Styles are available for use in Word, Excel and PowerPoint. Anaerobic respiration provides a much lower energy output than aerobic respiration. They must instead deal with the lack of oxygen associated with holding their breath when they are under water. The higher the partial pressure of gas and the longer the animal stays underwater, the more the tissues become saturated. They possess smooth streamlined bodies with very little hair and flipper-shaped fore limbs (Fig. Photo Courtesy: Microsoft.com You can't go wrong with the selection of basic, free and easy-to-use templates available on the Microsoft website. Free Daily Planner Templates If your life is far too chaotic and busy, you may need the more extensive capabilities of a daily planner instead of a wall calendar template. Exceptions include the polar bear, sea otter, and marine otter. Marine mammals have many adaptations that allow them to survive in various aquatic habitats. Figure 6.18 shows some examples of mammal adaptations. 6.20). Most of the styles exclude specific date information to ensure the templates are never outdated. In the water, fur also serves to keep mammals warm by trapping a layer of warm air near the skin. 6.18 B). The coloring page style is also a popular recurring choice that makes a great calendar for tracking kids' activities. Sperm whales routinely forage for prey for nearly an hour at depths of up to 1,000 m. Additionally, many marine mammal species live in polar climates or dive down into cold deep waters. How much you will have to pay will depend on the options you choose. 6.18 D). In the case of marine mammals, a few minutes is a relatively short period of time for the activities they must carry out under water—hunting for food, breeding, socializing, and navigating. Microsoft also gives its Office 365 users access to premium templates with stylish, colorful designs that have a polished, professional look. An inkjet printer — particularly a photo printer — should be up to the challenge of producing high-quality results if you choose the right paper. Unlike fish, marine mammals do not have gills to extract oxygen directly from the water. Instead of letting your wallet take a hit, you can make your own calendars using templates featuring both basic and visually stunning styles. In humans, the blood volume is seven percent of the body mass while in marine mammals it ranges from 10 to 20 percent. Photo Courtesy: Sydney Bourne/Cultura/Getty Images Case in point: If you create an elaborate, colorful design that is worthy of prime positioning on your wall, then you might want to think twice about dulling it down with a plain paper print job. Marine mammals, by definition, spend most, if not all, of their time in the ocean. The deepest diving mammal known is Cuvier's beaked whale (Ziphius cavirostris). These mechanisms allow mammals to thrive in a wide range of environments. Polar bears are truly marine mammals because they spend much of their time swimming in the open ocean, although they, too, can live for extended periods on land. Endothermic animals are sometimes described as being warm-blooded. 6.18 C). If it will merely be a pretty wall calendar, you can really make it shine by printing on high-gloss paper or photo paper. The exact designs may change each year, although you can always count on at least one eco-themed design in the collection. Free Basic Calendar Templates Despite all the visual appeal of a really cool calendar, sometimes all you need is a simple style you can write notes on and keep in the car or on your desk. If you choose a style to keep on your desk, you may also be happy with a standard printout on plain white paper, but fancy styles may deserve some fancy printing. Both cetaceans and sirenians are well adapted to swimming through millions of years of evolution by natural selection. Pinnipeds employ a combination of blubber and dense fur to retain body heat. One of the most important behaviors of marine mammals adapting to the problems of high-pressure diving is to expel most of the air out of their lungs prior to diving. Photo Courtesy: Alistair Berg/DigitalVision/Getty Images Using Your Printable Calendar Once you've selected the calendar style you want, it's time to think about how to print and display it. Elephant seals spend 90 percent of their time submerged, averaging 20 minutes per dive and routinely feeding at depths of 300–600 m (Fig. These adaptations help cetaceans and sirenians swim efficiently through the water. Some marine mammals have adaptations that fill the air spaces in their ears with blood, which, being a liquid, does not compress significantly under pressure. Individual sperm whales have been recorded diving to 2,250 m and staying under water for almost 90 minutes. If a mammal's body temperature begins to fall, it can shiver or increase its metabolic rate of converting food energy to heat. You can usually find free calendars at local banks, grocery stores and other smab businesses (who often use them as promotional tools), but they are typically small with squares that are too tiny to be very helpful for anything besides the most simple tasks. A lack of oxygen results in a decreased metabolism and a larger reliance on anaerobic respiration to power cellular machinery. Similarly, all sirenians are obligate swimmers. At 100 meters depth, the partial pressure of N2 is 8.69 atm and of O2 is 2.31 atm. If you think the calendar needs some extra pizzazz, clamp the pages onto a pretty clipboard and hang the clipboard on the wall or put the page inside an attractive, easy-to-open frame (since you will have to change it each month). California sea lions dive up to 200 meters (m) and spend approximately two minutes at a time underwater. Other marine mammal groups have adapted to living both at sea and on land. They also have powerful hind limbs that allow them to walk on land. All mammals are endothermic and use a variety of mechanisms to maintain steady, homeostatic internal body temperatures. Diving is complicated by a drastic increase in pressure underwater. It's a little harder to find planner options you can create and print for free, but it's not impossible. Unlike pinnipeds, otters, and polar bears, cetaceans cannot survive on land for extended periods of time. This combination of endothermic heat production and thick insulating blubber and fur allows marine mammals to survive in some of the coldest environments on Earth. They help you keep track of simple — but critically important — dates, like upcoming birthdays and anniversaries, but if you lead a busy life, their usefulness extends far beyond keeping up with the days of the week. While this is not a problem at depth, when the animal returns to the surface, they must off-gas, or breathe out the gas they have absorbed in their tissue. At the surface where the total pressure is 1 atm, the partial pressure of N2 is 0.79 atm and of O2 is 0.21 atm. Template Lab features a nice selection of daily planning layouts to fit a variety of tasks. Marine mammals also have, in general, increased blood volume compared with a human or other terrestrial mammals. The only real limit for usage is your imagination. Any standard inkjet printer can produce exactly what you need on plain white copy paper. With extensive training, some competitive free-divers can hold their breath for up to 12 minutes (Fig. Swimming Marine mammals have several adaptations for swimming. Cetaceans and sirenians also have wide, flat muscular tails (Fig. Additionally, if you decide you want to keep all your daily planner pages instead of throwing them away as you use them, you can take your pages in for basic binding at a nominal cost. Nitrogen gas at 3 atm or greater partial pressure can impair scuba divers and lead to variety of symptoms resembling alcohol intoxication including euphoria and hallucinations. If you're crafty and creative, use a hole-punch to make two holes at the top of each page and then thread ribbon or raffia through the holes, tie the ends in back and hang it on the wall. 6.21). For every increase of 10 m in depth below sea level, the pressure increases by one atmosphere (atm). If the organism surfaces too rapidly, the gases can bubble into the tissue causing damage and even fatality. During deep dives, where anaerobic respiration is common, many marine mammals have adaptations that aid in lactic acid tolerance. Another adaptation to holding their breath is that many marine mammals have increased the amount of oxygen that can be stored in their internal tissues compared to their terrestrial counterparts, primarily the lung, muscle, and blood. Photo Courtesy: TemplateLab.com Professional Assistance If you create a calendar you love but your printer isn't up to the challenge, you can always reach out to an office supply store for professional printing. Diving Adaptations A typical human can hold their breath underwater for less than two minutes. This is known as decompression sickness. A tagged individual of this species was recorded to dive to 2,992 m. Another consequence of anaerobic respiration is the accumulation of the toxic byproduct lactic acid. All mammals, including marine mammals, need to breathe to provide oxygen to cells, tissues, and organs so they can function. 6.22). The site also has an impressive selection of calendar templates and life planning tools.
